

Milford KiwiSaver Plan  
Milford KiwiSaver Conservative Fund  
Fund update for the quarter ended 31 December 2016

# Fund Update

This fund update was first made  
publicly available on 3 February 2017.

## What is the purpose of this update?

This document tells you how the Milford KiwiSaver Conservative Fund ('Fund') has performed and what fees were charged. The document will help you to compare the fund with other funds.

Milford Funds Limited prepared this update in accordance with the Financial Markets Conduct Act 2013. This information is not audited and may be updated.

## Description of this fund

The Fund's objective is to provide moderate returns and protect capital after management and administration charges but before tax over the minimum recommended investment timeframe.

It is a diversified fund that primarily invests in fixed interest securities, with a moderate allocation to equities.

Total value of the fund	\$32,685,432
Number of investors in the fund	1,260
The date the fund started	1 October 2012

# What are the risks of investing?

## Risk indicator for the Milford KiwiSaver Conservative Fund

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at [www.sorted.org.nz/tools/investor-kickstarter](http://www.sorted.org.nz/tools/investor-kickstarter).

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for the five years to 31 December 2016. Market index returns have been used for the period 1 January 2012 to 31 August 2015 as the Fund's investment policy has changed significantly and its returns before the change would not reflect its current investment policy. As a result, the risk indicator may provide a less reliable indicator of the potential volatility of the Fund. The risk indicator therefore reflects the Fund's actual returns only for the period 1 September 2015 to 31 December 2016. See Note 1 at the end of this Fund Update.

See the Product Disclosure Statement ('PDS') for more information about the risks associated with investing in this fund.

## How has the fund performed?

	Past year
<b>Annual return</b> (after deductions for charges and tax)	4.93%
<b>Annual return</b> (after deductions for charges but before tax)	6.81%
<b>Market index annual return</b> (reflects no deduction for charges and tax)	5.59%

We are required to disclose an appropriate market index as comparison. The market index return is a composite of benchmark index returns weighted for the Fund's target investment mix. The market index return is before tax and fees. The objective of the Fund is to provide moderate returns and protect capital after management and administration charges but before tax. Therefore, the Fund's investment strategy will be designed to achieve this.

The market index for the Fund was amended on 1 November 2016 to reflect a change in the underlying international equities wholesale fund that the Milford KiwiSaver Conservative Fund invests in. For more information on the market index, please refer to the Statement of Investment Policy and Objectives for the Milford KiwiSaver Plan, which can be found at [www.milfordasset.com/documents](http://www.milfordasset.com/documents) or on the offer register at [www.business.govt.nz/disclose](http://www.business.govt.nz/disclose).

# How has the fund performed?

## Annual Return Graph

This shows the return after fund charges and tax for each year ending 31 March since the fund started. The last bar shows the average annual return since the fund started, up to 31 December 2016.

Returns in this update are after tax at the highest prescribed investor rate (PIR) of tax for an individual New Zealand resident. Your tax may be lower.

**Important:** This does not tell you how the fund will perform in the future.

## What fees are investors charged?

Investors in the Fund are charged fund charges. In the year to 31 March 2016 these were:

	<b>% of net asset value</b>
<b>Total fund charges</b>	0.96%
<i>which are made up of:</i>	
<b>Total management and administration charges</b>	0.96%
<i>including:</i>	
Manager's basic fee <sup>2</sup>	0.77%
Other management and administration charges (estimate) <sup>3</sup>	0.19%
<b>Total performance-based fees</b>	N/A

<b>Other Charges</b>	<b>\$ amount per investor</b>
<b>Administration and registry charges</b>	\$36

Milford is unable to determine the fund charges charged by some non-related underlying funds within the 'other management and administration charges' so these charges have been estimated. It is not expected that these charges will be material. See Note 3 at the end of this Fund Update.

See the PDS for more information about the basis on which performance fees are charged.

Investors may also be charged individual action fees for specific actions or decisions (for example, for withdrawing from or switching funds) although these are not currently charged. See the PDS for the Milford KiwiSaver Plan on the offer register at [www.business.govt.nz/disclose](http://www.business.govt.nz/disclose) for more information about those fees.

## Example of how this applies to an investor

Small differences in fees and charges can have a big impact on your investment over the long term.

Joshua had \$10,000 in the fund at the start of the year and did not make any further contributions. At the end of the year,

Joshua received a return after fund charges were deducted of \$493 (that is 4.93% of his initial \$10,000). Joshua also had to pay other charges of \$36. This gives Joshua a total return after tax of \$457 for the year.

# What does the Fund invest in?

This shows the types of assets that the Fund invests in.

## Notes

1. The risk indicator has been calculated on the basis of five years of historic fund returns where available, and market index returns where required. Hence, the returns data used may not represent a full investment cycle for the Fund and the risk category may be different if calculated using a longer timeframe. If the period of returns used reflected an environment of unusually low or unusually high volatility, the risk indicator may not reflect the Fund's future volatility.
2. Milford charges a capped management fee that covers normal fund operating costs such as investment management, supervisor, custodial, fund accounting, audit and legal costs. For disclosure requirements, supervisor, audit and legal costs have been removed from the capped management fees to provide the manager's basic fee. These have been included in other management and administration charges.
3. If Milford is unable to determine the external fund charges, these have been estimated from recent financial statements based on the actual costs as a percentage of the average net asset value that were charged for the fund's previous financial year. These are reflected in the prices of the external funds that are used in the calculation of the unit price of the Fund.
4. The target investment mix indicates what are expected to apply over the course of an economic cycle, and should be considered as general only. Milford is an active manager and may at times deploy investment strategies that differ (within the allowable minimum and maximum bounds) materially from the targets.
