The Fund returned -0.4% in December, bringing the one year return to -4.4%. The Fund's majority exposure to cash and bonds (close to 90% of investments) is providing positive incremental returns as well as insulating the Fund from share markets that were generally weaker in December. This meant that the Fund preserved much of the modest gains of the past six months.

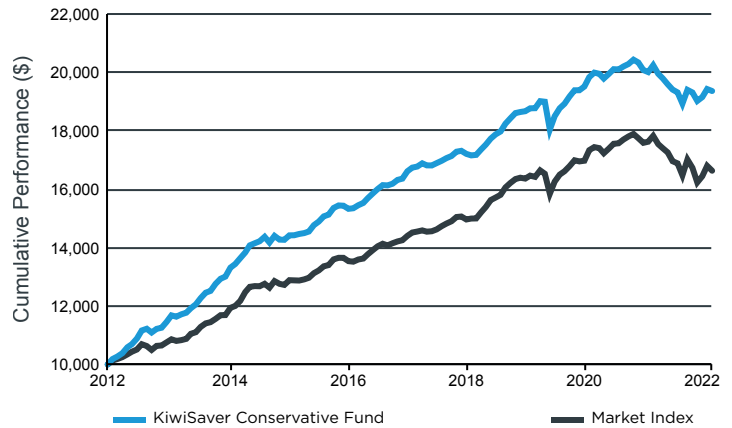

Central banks around the world slowed the pace of rate hikes in December, but surprised markets with their message of higher interest rates for longer. This backdrop of higher interest rates will be a headwind to the economy and financial markets for the foreseeable future. But higher rates also deliver much better returns on cash and bond investments which means the outlook for returns is improving despite the forecasts for recession in NZ and abroad.

For the lower risk Fund, this means maintaining a reduced exposure to risky shares whilst also looking for opportunities to profit from repositioning the Fund. For example, the past few months have seen a strong run up in the NZ dollar. We think this is at odds with the relatively weaker outlook for the NZ economy and so the Fund has been increasing its foreign currency exposure accordingly.

Whatever surprises 2023 has in store, we continue to look for profitable investments to help deliver strong, long-term returns.
